Ducting Joints

Sheetmetal Flange Joint

The NUCO sheetmetal flange joint consists of two sheetmetal flanges and a V-band coupling. The sheetmetal flanges are normally resistance seamwelded to the ducting to complete the ducting joint. Performance ratings for the standard NUCO sheetmetal-flange joints are given on pages XX and XX.

Machined Flange Joint

Machined-flange joints with o-ring or Teflon seals are available. Specifications for this type of joint appear on pages XX and XX.

For either type of joint- sheetmetal-flange or machined-flange- special flange configurations and materials are available on request to meet your specific requirements.

With superior performance of individual components, you can trust the quality of National Utilities Duct Joints. Saving resources for our customers by assembling reliable joints, these coupling-flange-seal combinations can be manufactured using the techniques that suit your pneumatic duct design requirements.
